

FCC Commissioners
The Federal Communications Commission RE: Docket 04-435
445 12th Street, SW
Washington, DC 20554

Dear FCC Commissioners ,

Cell phones will not work on a plane first of all. Second, the antenna configuration at all Cellular Base Station is not configured to transmit to 30 to 35 thousand feet above the ground, these antennas are directional antennas configured to transmit horizontally. Next if the cell phone is a 1900MHZ device it definitely will not be able to establish a link to the ground. Next the plane is traveling at excess of 400MPH, even in the rare event you did receive a signal it wouldn't last long. And don't forget the fact that your traveling in an aluminum shell which present it own problems of transmit and receive. So why are we waisting our time with this.

Sincerely,

William Millner
